

TECHNICAL MANUAL
No. 5-852-6
AIR FORCE REGULATION
AFR 88-11, VOLUME 5

HEADQUARTERS
DEPARTMENTS OF THE ARMY
AND THE AIR FORCE
WASHINGTON, DC, 31 August 1987

ARCTIC AND SUBARCTIC CONSTRUCTION: UTILITIES

TABLE OF CONTENTS

		Paragraph	Page
CHAPTER 1.	INTRODUCTION		
	Purpose	1-1	1-1
	Scope	1-2	1-1
	References	1-3	1-1
	Environmental conditions in the Arctic and Subarctic	1-4	1-1
CHAPTER 2	PLANNING UTILITY SYSTEMS		
	General considerations	2-1	2-1
	Installation layout	2-1	2-1
	Equipment	2-3	2-2
	Revegetation	2-4	2-2
CHAPTER 3	WATER SOURCE DEVELOPMENT		
	General	3-1	3-1
	Environmental constraints	3-2	3-1
	Surface waters	3-3	3-1
	Ground water	3-4	3-2
	Other water sources	3-5	3-2
	Structures	3-6	3-2
CHAPTER 4	WATER TREATMENT		
	General	4-1	4-1
	Temperature effects	4-2	4-1
	Low temperature treatment	4-3	4-1
	Removal of minerals and organics	4-4	4-2
	Treatment of brackish and saline waters	4-5	4-2
CHAPTER 5	WATER STORAGE		
	General	5-1	5-1
	Tank materials	5-2	5-2
	Tank design	5-3	5-3
	Tank foundations	5-4	5-4
	Earth reservoirs	5-5	5-4
CHAPTER 6	WATER DISTRIBUTION		
	General	6-1	6-1
	Single pipe recirculation system	6-2	6-1
	Alternative systems	6-3	6-1
	Service lines	6-4	6-3
	Materials	6-5	6-6
	Appurtenances	6-6	6-6
	Back-up freeze protection	6-7	6-7

*This manual supersedes TM 5-852-5/AFM 88-19, Chapter 5, Oct 1954.

TM 5-852-5/AFR 88-19, Volume 5

		Paragraph	Page
CHAPTER 7	WASTEWATER COLLECTION		
	General	7-1	7-1
	Design considerations	7-2	7-1
	Appurtenances	7-3	7-2
	Pump stations	7-4	7-3
	Pressure sewerage	7-5	7-5
	Vacuum sewerage	7-6	7-6
CHAPTER 8	UTILIDORS		
	General	8-1	8-1
	Design considerations	8-2	8-1
CHAPTER 9	WASTEWATER TREATMENT		
	General	9-1	9-1
	Wastewater characteristics	9-2	9-1
	Unit operations	9-3	9-1
	Unit processes	9-4	9-3
	Sludge Management	9-5	9-8
	Outfalls	9-6	9-9
	Alternatives to treatment/disposal	9-7	9-10
CHAPTER 10	FIRE PROTECTION		
	General	10-1	10-1
	Hydrants	10-2	10-1
	Truck systems	10-3	10-1
	Chemical and gas methods	10-4	10-1
	Alarm systems	10-5	10-1
CHAPTER 11	POWER DISTRIBUTION AND COMMUNICATION SYSTEMS		
	General considerations	11-1	11-1
	Grounding	11-2	11-1
	Underground systems	11-3	11-1
	Aerial systems	11-4	11-1
	Special considerations	11-5	11-2
CHAPTER 12	THERMAL CONSIDERATIONS		
	General considerations	12-1	12-1
	Freezing of pipes and tanks	12-2	12-1
	Thawing of frozen pipes	12-3	12-1
	Heat loss from pipes	12-4	12-1
	Physical methods for reducing heat loss	12-5	12-2
	Heat loss replacement	12-6	12-3
	Insulation materials	12-7	12-5
	Thermal calculations	12-8	12-5
	Design examples	12-9	12-16
APPENDIX A.	REFERENCES		A-1
BIBLIOGRAPHY			Biblio 1

LIST OF FIGURES

		Page
Figure 3-1.	Hydrograph of mean daily discharge, Kuparuk River	3-1
3-2.	Piping schematic for water intake	3-3
3-3.	Water intakes	3-4
3-4.	Infiltration galleries	3-4
3-5.	Well seal	3-5
3-6.	Casing head construction for water well in shallow permafrost when surface soils are susceptible to heaving	3-6
5-1.	Wood tank with insulation and liner on inside	5-1
5-2.	Steel tank with board insulation and metal cladding	5-2
5-3.	Insulated buried concrete tank	5-2

5-4.	Above-ground concrete tank, Greenland	5-3
6-1.	Layout and location of mains for single pipe recirculation	6-1
6-2.	Typical utilidor and packaged pre insulated pipe	6-2
6-3.	Schematic diagram of a dual pipe system	6-2
6-4.	Water service line, with pit orifices	6-3
6-5.	Typical above-ground service line takeoffs	6-4
6-6.	Typical above-ground service line	6-4
6-7.	Underground valve and box	6-5
6-8.	Dual service	6-5
6-9.	Above-ground hydrant	6-7
6-10.	Below-ground hydrant	6-7
6-11.	Thaw tube, thawing method	6-8
6-12.	Alternatives for thawing service lines	6-9
6-13.	Approximate times and current for thawing steel pipes	6-9
7-1.	Typical sewer system manhole	7-2
7-2.	Typical cleanout	7-3
7-3.	Typical siphon	7-3
7-4.	Typical service connection (wall)	7-4
7-5.	Typical service connection (floor)	7-4
8-1.	Various utilidors installed in cold regions	8-2
8-2.	Typical utilidors	8-3
8-3.	Temperature variation in a small utilidor with central hot water distribution	8-4
8-4.	Above-ground utilidor hydrant	8-4
8-5.	Sewer cleanouts	8-5
9-1.	Viscosity effects vs. temperature	9-2
9-2.	Settling detention time vs. temperature	9-2
9-3.	Lagoon construction details	9-4
9-4.	Dimensions of lagoons	9-6
9-5.	Oxidation ditch for the Subarctic	9-8
9-6.	Example of elevated outfall design	9-9
11-1.	Underground cable guidelines	11-1
11-2.	Granular pad utility tower foundations	11-3
11-3.	Foundation designs employing minimum and no granular material for utility towers and power poles	11-4
12-1.	Methods of insulating buried pipe	12-2
12-2.	Relative heat loss from single pipes insulated with same volume of insulation	12-3
12-3.	Relative heat loss from two pipes insulated with same volume of insulation	12-3
12-4.	Temperature drop and freeze-up time in pipes	12-6
12-5.	Steady-state thermal equations for above-surface pipes	12-9
12-6.	Steady-state thermal equations for below-surface pipes	12-10
12-7.	Steady-state thermal resistance of various shapes and bodies	12-11
12-8.	Thermal resistance of a hollow cylinder, solution to the equation $R = \ln(r_o/r_{\perp})/2\pi k$	12-12
12-9.	Arccosh (H/r) versus H/r _⊥ for solution of thaw zone equations	12-12
12-10.	(H _⊥ /c) and (r ₂ /c) versus A factor for solution of thaw zone equations	12-13
12-11.	Correction coefficient λ , for use in Berggren equation	12-15

LIST OF TABLES

Table		Page	
	2-1.	Approximate useful life of utility system components in cold regions	2-1
	2-2.	Revegetation for tundra areas	2-2
	4-1.	Fluoride dosages recommended by the U.S. Public Health Service for Alaska (TM 5-813-3May control for military installations)	4-2
	7-1.	Characteristics of wastewater collection systems	7-1
	9-1.	Solubility of common treatment chemicals	9-2
	9-2.	Typical aeration equipment	9-6
	9-3.	Temperature coefficients for biological treatment	9-7
	9-4.	Typical sludge production rates	9-8
	12-1.	List of symbols used in thermal calculations	12-7
	12-2.	Thermal conductivities of common materials	12-8
	12-3.	Typical values of the n-factor used to correlate air temperature with surface temperature of various materials	12-16
	12-4.	m-factors for ice thickness estimation	12-16
